

# LightCell Plus Tool Kit

The LightCell Plus tool kit is a plug and play ready to use system composed of a Solo and Duo LightCells, LDP2 driver and power supply needed for operation.

Lighting manufacturers and designers in mind, the tool kit is the best way to experiment and understand what the LightCell can do.

The units are connected by a 50cm long cable for maximum flexibility. As thermal heatsink is already attached, the units can be used for demo or mock up purposes.

LightCell Tool Kit

Available in 2700K, 3000K, 4000K, or 3000K Ivory White

## Kit Includes:
